carrier frequencies; transmitting the modulated bit stream on a first propagation mode from the downhole telemetry cartridge to the uphole telemetry unit; and operating the uphole telemetry unit to demodulate the received bitstream.--

In the drawings:

Please amend the drawings as follows:

The Examiner stated in the Office Action that Figure 1 should be designated by a legend such as "Prior Art" because that which is old is illustrated. Applicants herewith submit a proposed drawing amendment for approval by the Examiner. Enclosed is a copy of Figure 1 marked up to indicate the change.

In the claims:

Please add the following new claims:

- SUB B17*
A2
- 30. The telemetry system of Claim 1, wherein the wireline cable is a heptacable.--
 - 31. The method of Claim 21, wherein the wireline cable is a heptacable.--
 - 32. The method of Claim 27, wherein the wireline cable is a heptacable.--
